

About Me

As an experienced IT Product Owner and Project Coordinator, I have successfully bridged communication gaps between business units and IT teams, ensuring the timely and efficient completion of projects. My focus has been on understanding the business requirements clearly and translating them into actionable tasks for IT teams, minimizing delays caused by miscommunication.

In large-scale projects involving multiple IT teams, I have taken the lead in coordinating efforts, defining roles and responsibilities, and breaking down tasks into manageable units. By aligning the objectives of various teams and ensuring seamless collaboration, I have contributed significantly to driving projects forward and achieving desired outcomes on time and within scope.

My approach to project management is centered on fostering strong communication, clear task delegation, and effective team coordination, all of which are essential for delivering successful IT solutions.
